

The Second Idaho Wastewater Reuse Conference

Conference Announcement Call for Papers Availability of Sponsorships

June 13-14, 2006 Boise, Idaho

Pressures on Idaho's water resources continue unabated. Our population is surging; water supplies are over-allocated; climate appears to be changing; regulatory challenges are increasing; conservation and sustainable resources are common place.

Reuse offers another tool to manage Idaho wastewater effluents. The advantages of its financial, technical, operational, and regulatory flexibility have been demonstrated in at least 40 states.

Over 150 professionals attended the first reuse conference last May. They heard about Idaho's new regulations, reuse projects across the state and region, and the implications of water rights, public outreach, financial planning, and TMDLs.

Complete conference details are on the website.

The Second Idaho Wastewater Reuse Conference will emphasize wastewater effluents as an asset, not a liability. DEQ will review changes to its reuse regulations. Nationally-recognized speakers will offer insights into successful municipal and industrial reuse projects. Other professionals are expected to discuss implications of siting, design, operations, public outreach, secondary utilities, and assessing the market value of such effluents. Internationally used technologies will be showcased and you will hear case studies of their applications in varied climates and under public and private ownership.

Call for Papers

Papers are being solicited and will be accepted for all aspects of wastewater reuse. Those addressing Idaho issues and locales will be given high priority.

Notice of Sponsorships

Limited opportunities are available to sponsor breaks, lunches, and social hour. Please contact John Moeller (208.863.7343) for details.
